

PROPERTY MAINTENANCE • MEASURED TRUE

The maintenance platform that measures the labor.

Every hour, receipt, and door — reconciled automatically. Caliper turns the pay logs, rent rolls, and P&L sheets your crew and office keep by hand into one connected, encrypted ledger — and gives your residents a way in, so the whole building runs on one system.

caliper.solutions

Rent is tracked to the dollar. Labor lives in pay logs, texts, and memory.

Labor is the biggest controllable cost in your buildings — and the one you can't see per door. When an owner asks what a unit actually cost to maintain, the honest answer is a guess. Caliper measures it.

The Friday spreadsheet

- × The pay log, the rent roll, and the P&L are three different files — none of them agree.
- × A tech's day gets split across four buildings from memory, a week later.
- × Receipts in a glovebox, hours on a text thread, nothing tied to a door.
- × "What does that building cost us to run?" — nobody can answer it with a straight face.

With Caliper

- **One ledger.** Timers, receipts, leases, and building expenses in the same system.
- **Hours land on the building** as they happen — the crew allocates from the door, not the office on Friday.
- **A per-building P&L** that updates the moment a timer closes or a receipt is approved.
- **Crew on phones, office on desktop, residents at the door** — everyone on one system.

One connected ledger, from the timer in the field to the P&L per door.

Three steps, no spreadsheets. The crew measures, the engine allocates, the office proves.

01 • FIELD

Measure the hour

Crews clock in with a geofenced, hands-free timer and snap receipts — real hours and materials, on the right door, not a spreadsheet after the fact.

02 • ALLOCATE

Reconcile it automatically

Every hour and dollar lands on the building and unit it was spent on — the allocation engine does the math the moment a timer closes.

03 • PROVE

See the true cost

Per-door P&L, forecasts, and statements that assemble themselves — the one number nobody else in the category can produce.

PRO • OFFICE DASHBOARD • SAMPLE DATA

Everyone in the building — priced to the person using it.

Three products share one backend, so a receipt snapped by the crew, a CAM statement for a commercial tenant, and a repair reported from a resident's door all resolve against the same rent roll.

CALIPER

Pro

For maintenance companies and their crews. Office dispatch, a crew in the field, and the money per door — the system of record.

PORTAL · OFFICE

Office

Dashboards & dispatch, approvals, per-door P&L, team, compliance & payroll.

PORTAL · CREW

Crew

Timers, orders, receipts, and chat on any phone — offline-safe, voice-driven.

CALIPER

Enterprise

For office parks & towers — many tenants, many buildings, one ledger.

PORTAL · ESTATES

Estates

Multi-building roll-ups & dashboards, auditable operating cost per suite, measured labor across the estate, CAM reconciliation.

CALIPER

Community

For residents & tenants — report repairs and reach your building. Free with Pro.

PORTAL · RESIDENTS

Residents

Report a repair in seconds, follow it to done, hear from your management office, read the handbook, reserve an amenity.

ONE LEDGER

timers · receipts · leases · expenses — every entry carries org · property · unit · date · rate

AES-256 · role-scoped · your brand

DASHBOARD

True labor cost, weekly and monthly trend, the doors that eat the most labor, labor by operator — and a click from any chart to the entries behind it.

TODAY

Who's clocked onto which job right now, crew workloads, and the orders still unassigned. Dispatch from here.

APPROVALS

Field reports, receipts, and resident requests come in as a queue. Approve it and it hits the right building's P&L; send it back and it doesn't.

TEAM

Every operator at daily, weekly, monthly, or yearly grain, on a pay period that matches yours — Saturday start included.

The crew: built for people who never had software.

Voice-driven, offline-safe, one thumb. Everything the field needs, nothing the office does — and every hour arrives already allocated.

● Geofenced clock-in Start the timer at the door. Caliper knows which building you're standing at — verified on-site.	● Pause & resume A priority call mid-job? Pause, handle it, come back. A multi-day job never loses a minute.
● Voice work orders "Unit 4B, leaking faucet, tomorrow." Caliper writes the order and asks for the photo.	● Snap the receipt Photo it at the counter. OCR reads the line items; AI checks the price against the vendor.
● Split your day Four buildings today? Divide the day from the stairwell — no back-office guessing.	● Chat & voice notes Office ↔ crew and per-job threads. The office can summarize a thread into the work order with AI.

CREW MODULES

- Field timer
- Orders
- Timesheet
- Chat
- Purchases — receipts
- Vendors
- Docs

CREW • TODAY

CREW • WORK ORDERS

From a resident's photo to a billed repair — one pipeline, photos required at every step.

- VOICE OR TYPED**
"Unit 4B, leaking faucet, for Gianni tomorrow at 301 Central" becomes a structured order — unit, task, assignee, due date, building, category.
- RESIDENT QR INTAKE**
A request from a QR on the door lands in the Requests queue already knowing its building and unit. Triage it into an order in one step.
- PER-JOB THREADS**
Every order carries a chat thread and photos; the office can summarize the thread into the order with AI.

- MAKE-READY**
A vacant unit moves left → right until it's leased again; each stage is lost rent until it does.
- MAINTENANCE SCHEDULE**
Recurring work on a cadence — HVAC, inspections, turns — assigned or open, per building and unit.
- INSPECTIONS**
Templated condition checklists, pass/fail, on the record — move-in, move-out, periodic.

CREW · WORK ORDERS

The bottom line of every door — rent in, verified labor and materials out.

Change a rate or log a job and every building's P&L moves. Labor comes straight from the crew's verified timers; materials from approved receipts.

PER-BUILDING P&L

Rent, labor, materials, and fixed overhead resolved to one statement per building — automatically.

SALARY DISPERSION

A fixed salary spread across the doors actually worked, by hours — no lump of overhead.

ALLOCATED VS. UNALLOCATED

See — and fix — every hour and dollar not yet tied to a door, before it hits the books.

FORECAST & STATEMENTS

Expense forecasts and monthly P&L statements that assemble themselves from the same entries.

caliper.solutions / p&l

Per-door P&L

Every building's real bottom line: rent in, minus the **verified labor** and materials logged against it. The one number nobody else can produce — because nobody else measures the labor.

19 doors

\$23,830 rent / mo

\$27,331 labor + materials

-\$3,501 net / mo (est.)

\$1,438 avg cost / door

93% labor verified on-site

Rent is monthly; labor + materials are the maintenance spend captured to date. Net is illustrative — it shows how measured labor flows to per-door economics.

Labor comes straight from the crew's verified timers; materials from approved receipts. Change a rate or log a job and every door's P&L moves — the connected ledger, end to end.

PER-DOOR P&L • SAMPLE DATA

MONEY
MODULES

- Purchases
- Per-door P&L
- P&L statement
- Forecast
- Vendors & materials

Hours that compile themselves — on your pay period, not a template's.

The crew's running timer flows onto the sheet in real time; hours and pay compile as they accrue, and land on the building as they do.

- WEEK PLANNER

Crew self-log on a week view; entries carry the property and unit, not just the hours.
- MASTER TALLIES

The office sees per-operator and per-property totals at day, week, month, and year grain.
- YOUR PAY PERIOD

Weekly, starting the day your payroll starts — Saturday included — so payroll never disagrees.
- VERSIONED RATES

Rate changes and mid-log overrides are kept, so history reconciles too.
- NEXT

Pay-period lock and payroll CSV export — locked periods immutable, corrections as audited adjustments.

TIMESHEET • SAMPLE DATA

The rent roll is the spine. Every hour and dollar resolves against it.

Units, tenants, occupancy, and renewals — imported from the sheet you already keep, or synced from Rent Manager.

- RENT ROLL & LEASING

Every unit, tenant, lease term, and renewal; occupancy and rent math that treat land and held parcels correctly.
- PROPERTIES

Per-building labor, drill to per-unit and per-category cost, unit-mix at a glance.
- CALENDAR

Lease expirations, move-ins, work-order due dates, and labor — day, week, and month together.
- INSURANCE & DOCS

Certificates of insurance for vendors and tenants with expiry tracking; leases, W-gs, and house rules on one shelf.
- IN PROGRESS

Rent Manager read-only sync — RM stays your system of record for properties and units; Caliper owns work orders and cost.

RENT ROLL • SAMPLE DATA

Caliper Enterprise — many tenants, many buildings, one measured ledger.

Portfolio-first, with no crew or dispatch apparatus in the way. Roll-ups across the estate, an auditable operating cost per suite, and a CAM reconciliation your tenants can't argue with — because the labor behind it was measured, not estimated.

ENTERPRISE · ESTATES · EVERY MODULE

PORTFOLIO

Portfolio — rent rollBuildings

CAM RECONCILIATION

A building's measured operating cost — labor plus materials — allocated pro-rata by rentable square footage across its commercial tenants, then trued up against the CAM each was billed. Per-tenant, branded statements, print or PDF.

RENTABLE SF PER SUITE

Editable on the rent roll, so CAM shares are exact — not a rounded estimate from last year's spreadsheet.

TENANT-FACING SURFACES

A branded building handbook, amenity reservations, and certificate-of-insurance tracking for tenants as well as vendors.

Caliper Community — report a repair in seconds, follow it to done, reach your building.

Residents aren't ticket submitters. Each one is bound to a unit that already exists in your rent roll, so a repair reported from a door arrives in your queue already knowing its building, unit, and owner.

FOR THE OFFICE

Requests land in Pro's Requests queue; resident claims are verified against the lease in the Residents queue. Handbooks and amenities are authored by staff, read by residents.

WHY IT'S FREE

Fewer nuisance tickets and after-hours calls, and residents who feel at home stay longer — which Pro already measures as make-ready labor per door.

No rip-and-replace. Caliper reads the spreadsheets you already keep.

The Excel import reads messy pay logs, rent rolls, and P&L sheets in whatever shape they're in — flags missing rates, backfills history, and stands the whole operation up as one ledger.

01 · SEND THE WORKBOOK

Pay logs, rent roll, P&L

Any shape. Tabs that mix pay logs with service logs and inventories are exactly what the importer was built on.

02 · WE STAND IT UP

Properties, units, people, rates, history

Rows resolve to buildings and units; operators and rates are matched; unallocated hours are surfaced for a one-time tag, not lost.

03 · THE CREW CLOCKS IN

Phones on Monday, P&L by Friday

Invite the team with role-scoped links. The crew gets field tools; the office gets the first reconciled week.

Excel-native IMPORT, ANY SHAPE	Rent Manager READ-ONLY SYNC · IN PROGRESS	Role-scoped INVITES FOR OFFICE AND CREW	Your brand WHITE-LABEL PER ORGANIZATION
--	---	---	---

Above-market security, because it holds your payroll.

Pay rates, operator identities, and financials are encrypted at rest with keys that belong to your organization. Every read and write is scoped to your org and your role — enforced at the database, not the app.

FIELD-LEVEL ENCRYPTION

AES-256-GCM + AWS KMS

Pay and financial fields are encrypted per org with envelope keys. Fail-closed: if a key can't be reached, nothing is shown.

ROW-LEVEL SECURITY

Deny by default

Every query is scoped to the organization and role at the database. There is no cross-tenant path to write.

ROLE SEPARATION

Crew see the field

Contractors get field tools only; financials and the P&L are gated to the office. Invites are role-scoped from day one.

COMPLIANCE

On the record

Credential expiry, contractor paperwork, and an audit trail of sensitive actions — approvals, invites, exports, renames.

AES-256
